By: Andrew Johnson

Use Cases:

Use Case 1: Contact sweenydev email.

"User wishes to contact sweenydev via email"

Use Case 2: Contact sweenydev phone.
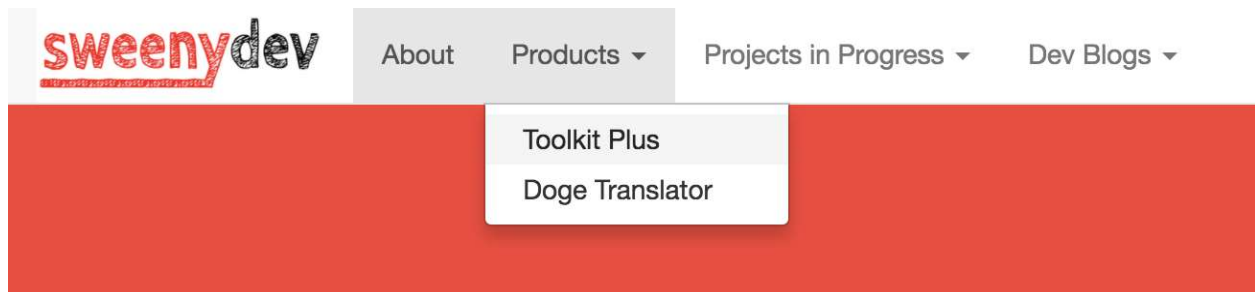

"User wishes to contact sweenydev via phone"

Use Case 3: Contact sweenydev github.

   "User wishes to contact sweenydev via github"

Use Case 4: Find product.

   "User wishes to find product"

Use Case 5: Find product dev blog.

"User wishes to find product dev blog."

Use Case 6: Download product.

"User wishes to download a product"

Use Case 7: Comment on product.

"User wishes to comment on a product; User is or is not logged in"
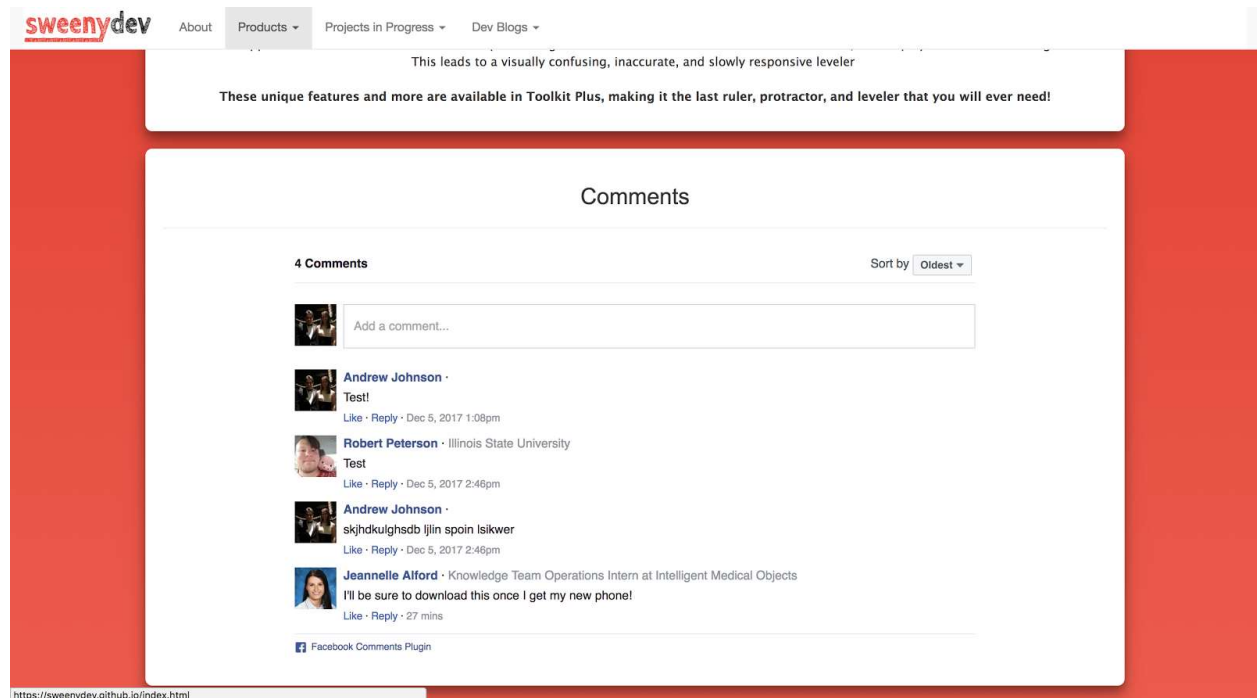

User Case 8: Find Blog Post.

"User wishes to find blog post"

Use Case 9: Comment on blog post.
"User wishes to comment on a blog post; User is or is not logged in"

Use Case 10: Help with project
"User wishes to help with project in development"

Brag Sheet

<u>Utilizes advanced javascript styling:</u> I have added some java script functions that dynamically change the style of the page, which should hopefully set it apart and add a lot of flair and professionality to the site. The scroll focus transparency in particular really brings the site to life.

<u>Integrates facebook commenting:</u> I have integrated Facebook commenting capability to implement the commenting features required by the products, projects, and blog pages. This is beneficial for the following reasons:
- Less overhead, as it eliminates the need to store comments on the server.
- No verification needed, as Facebook handles all of the verification by requiring a Facebook account to comment.
- Easy moderation and maintenance, as Facebook will always keep this section of the site fairly up to date with Facebook's standards, with only occasionally potential tweaks needed by our developers.

<u>Logo Design:</u> A long time was spent designing, drafting, and perfecting this logo. From font, to color, to geometry choices, I needed to embody the idiosyncratic, yet professionally capable traits of this group. I feel that I accomplished this quite well

<u>General Design of Page:</u> A lot of care and diligent perfectionism went into the CSS design of this this website. Because this is a promotional website for a company that boasts web dev capabilities, it seems very important to me that this site looks clean, professional, and modern. The look and feel of the site may even be argued to be the most important part in this case.

<u>Easter Egg Inclusion:</u> Because I enjoyed making the game from assignment 3 so much, I decided to include it as an Easter egg in this site as well. Doing this showcases the fun nature of the company, and the company's web dev skills in actually making the game.

<u>Originality and Real World Puropse:</u> This website has been designed for use by myself and my coworkers in a real world scenario. As such, everything on this website is pure original content developed mostly by myself. With such being true, this website will continue to grow, evolve, and be maintained as sweenydev grows.

Bugs and Missing/ Changed Features

Star Rating for Projects: This has not yet been implemented, even though it was in the project scope. Will be implemented at a later date.

Contact page: This has been intentionally left out, as I found it to be a redundant page considering all valuable contact information is found at the bottom of the about page.

Logo in footer: With the style of the current page, I found it needless to include a footer. It may be added at a later date if sweenydev deems it necessary.

Mobile Optimization: While this website is responsive in all ways, it does not always look as good on mobile as it does on desktop. I will continue working towards making this better.
